

February 2016

Metro North Transmission Study Update

As you know we have been studying three alternatives for a new transmission line in Metro Vancouver. Since our last update to you, we have:

- continued to engage with First Nations;
- continued to meet with municipalities along the three routing alternatives;
- continued to meet with transportation authorities about where and how we can safely cross their infrastructure;
- undertaken additional geotechnical and archaeological studies;
- explored the condition of key transmission circuits in the Metro North region and,
- reviewed and analyzed the load forecast to confirm the future needs of the transmission system.

And we have more work to do. In the coming weeks and months you may see crews in your neighbourhood collecting additional field data to inform the study.

More information about the study is available at bchydro.com/mnt and, as always, we remain available to answer any questions, please call or email us (contact information below).

Sincerely,

Judy Dobrowolski
